DEEP-SEA ANIMAL ADAPTATIONS

Animals in the ocean have adapted to the extremes of the ocean, such as the dark, the cold, the pressure, as well as for hunting prey and hiding from predators.

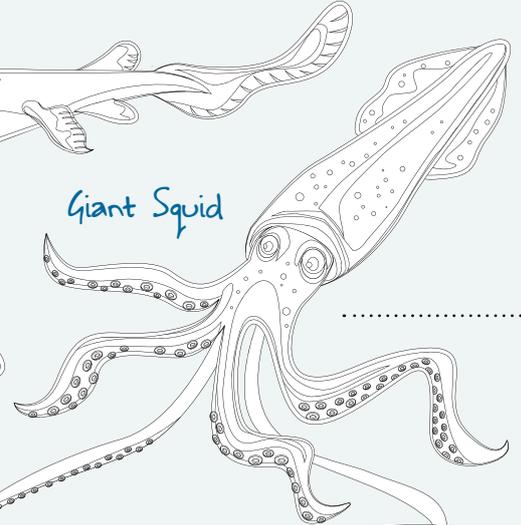

Look up a dictionary and explain what adaptation means:

Some species have developed some very unusual and distinct adaptations. Next to each animal, list one of their adaptations that helps them survive in the extreme ocean.

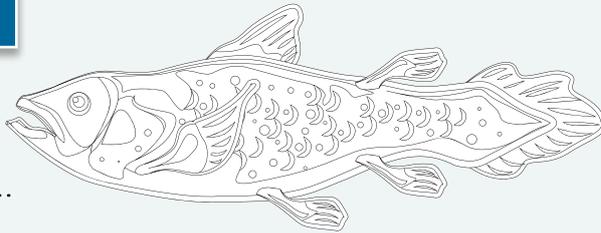

Goblin Shark

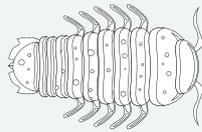

Giant Squid

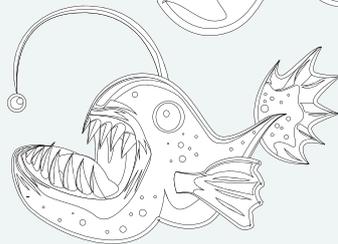

Coelacanth

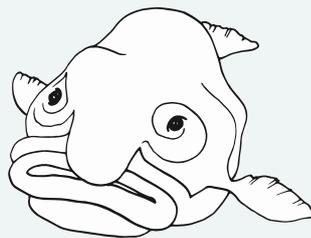

Giant Isopod

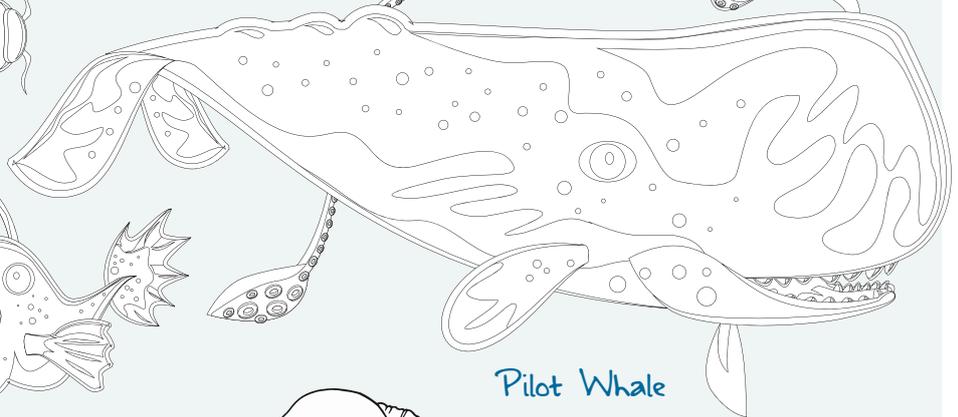

Anglerfish

Blob Fish

Pilot Whale

The animals adaptations might include one of the following: Gigantism / Soft skeletons / No bones / Exoskeleton / Super sight / Flexible rib cage / Bioluminescence.

Are there any other animals and adaptations that you think are pretty cool.

List them here with one of their distinct features that helps them survive:
